Open-Source LLMs

LLM-as-a-Judge

AI Policy, Governance, and Regulation

Certifications

Reactjs : Modern React and Redux

Vinit Brahmankar

Full Stack AI Engineer | LLM Apps, RAG & Agentic Workflows | Python · FastAPI · React · Next.js | 8 yrs shipping production software | Open to UAE | Immediate Joiner

Pune Division, Maharashtra, India

Summary

I build LLM products that hold up in production, and I ship every layer of them: the Python/FastAPI service, the retrieval and agent logic, the evaluation that tells you whether it actually works, and the React interface people use.What that looks like in practice:• Multi-agent Claude Code pipelines (planner, implementer, judge, parallel sub-agents) running 300-500k tokens a day, turning 4-5 hours of feature work into 20-30 minutes.• A WhatsApp AI assistant with source-validated answers: citation IDs checked against retrieved chunks, a retrieval-confidence gate before generation, prices and dates kept out of the model, and full traces in Langfuse.• A multilingual RAG support bot (LangChain, FAISS, OpenAI embeddings) with 94.4% language-detection accuracy across 10 languages, including transliterated Hindi that off-the-shelf detectors get wrong.• A grader-reliability study over 419 agent tool calls, where two LLM judges agreed at Cohen's kappa 0.309, enough to swing a headline leakage rate from 27% to 60%. I now validate every LLM judge against a second model family before trusting its scores.• That background is why my AI work ships. I measure before I build, I care about latency and failure modes, and I build the product around the model call, not just the call.Stack: Python, FastAPI, LangChain, OpenAI, Azure OpenAI, AWS Bedrock, FAISS, Langfuse, TensorFlow, TypeScript, React, Next.js, Node.js, PostgreSQL, Docker, AWS.Looking for AI Engineer roles. Open to relocating, available immediately. vinitbrahmankar@gmail.com

Experience

Jiffy.com
Senior Full Stack Engineer
August 2025 - Present (1 year 4 months)
California, United States

▪# Lifted conversion on a complex multi-step product flow from ~2% to 4% through Mixpanel-instrumented funnel analysis and interaction redesign
▪# Cut feature cycles from 4-5 hours to 20-30 minutes with Claude Code multi-agent workflows (parallel agents, sub-agents, plan-implementor pipelines) that read Jira and Confluence tickets over MCP, plan, build on approval and raise PRs.
▪# Built LangGraph agentic workflows for automated code review and test generation that validate LLM output quality before anything lands in production.
▪# Added a git worktree skill for parallel branch work on a Docker-based app, and a background agent that addresses PR review comments.
▪# Built backend features across Node.js services and Rails controllers and models, with Postgres schemas, migrations and indexes behind the React checkout flows.
▪# Architected event-driven backends on Node.js and AWS Lambda for async order processing, caching layers and background workers behind high-volume checkout flows.
▪# Owned full stack architecture end to end, from SSR/SSG/ISR rendering to state management, and shipped feature flags for controlled rollouts, dark launches and kill switches.

Publicis Sapient

Full Stack Engineer

January 2022 - August 2025 (3 years 8 months)
Pune District, Maharashtra, India

▪# Client: Marks & Spencer — one of the UK's largest retail platforms, 10M+ monthly users, multi-region, high-traffic customer journeys
▪# Brought LCP on product detail pages from outside the Core Web Vitals green zone into green threshold, closing a 5-10% deviation through SSR migration, image optimisation, and render-blocking script elimination
▪# Architected the design system from a fragmented component library into a governed platform with token architecture, variant APIs, Storybook documentation, and contribution guidelines, used by cross-functional teams building consistently at scale
▪# Ran 2-3 concurrent A/B experiments on conversion-critical surfaces, connecting every major design and frontend decision to measurable business outcomes before full rollout
▪# Built and optimised data-dense product listing, filtering, and search interfaces handling large catalogues with real-time inventory updates, designed for information density and performance under load

▪# Led WCAG 2.1 AA accessibility programmes end-to-end: audits, remediation prioritisation, and implementation across semantic HTML, ARIA roles, focus management, and keyboard navigation
▪# Owned rendering architecture across the platform: SSR, SSG, and ISR chosen deliberately per surface based on traffic patterns, update frequency, and performance requirements

Connecticus Technologies Pvt Ltd
Software Engineer
July 2019 - January 2022 (2 years 7 months)
Pune

▪# Frontend engineer full ownership from component architecture to production deployment
▪# Built React frontends for multiple B2B SaaS products as the primary frontend engineer full ownership from component architecture to production deployment
▪# Established Jest + React Testing Library testing standards; took component test coverage from near-zero to meaningful coverage on all core modules
▪# Translated wireframes and user flows directly into production-ready React components with no handoff gap

Accenture
Associate Software Engineer
October 2018 - June 2019 (9 months)
Bangalore

▪# Contributed to enterprise application development in a cross-functional team building UI components, integrating REST APIs, and learning production engineering practices at scale
▪# Worked across requirements gathering, development, and QA cycles on client-facing web applications

---

Education

Pimpri Chinchwad Education Trust'S. Pimpri Chinchwad College Of Engineering
Master of Technology, Artificial Intelligence · (August 2025 - June 2027)

Vishwakarma Institute of Information Technology
Bachelor's degree, Computer Science · (2014 - 2018)
